

## Programmable voltage reference

### Features

- Adjustable output voltage:  $V_{REF}$  to 36 V
- Sink current capability: 1 to 100 mA
- Typical output impedance: 0.22  $\Omega$
- 0.4% and 0.25% voltage precision

### Description

The TL1431 is a programmable shunt voltage reference with guaranteed temperature stability over the entire operating temperature range.

The output voltage may be set to any value between 2.5 V and 36 V with two external resistors.

The TL1431 operates with a wide current range from 1 to 100 mA with a typical dynamic impedance of 0.2  $\Omega$ .

Figure 3. TL1431 block diagram

## 2 Absolute maximum ratings and operating conditions

**Table 1. Absolute maximum ratings**

Symbol	Parameter	Value	Unit
$V_{KA}$	Cathode to anode voltage	37	V
$I_k$	Continuous cathode current range	-100 to +150	mA
$I_{ref}$	Reference input current range	-0.05 to +10	mA
$T_j$	Junction temperature	+150	°C
$P_d$	Power dissipation <sup>(1)</sup>		
	TO92 SO-8 batwing	625 960	mW
$T_{stg}$	Storage temperature range	-65 to +150	°C
ESD	HBM: human body model <sup>(2)</sup>	2000	V
	MM: machine model <sup>(3)</sup>	200	
	CDM: charged device model <sup>(4)</sup>	1500	

1. Calculated with  $T_j=+150^{\circ}\text{C}$  and  $T_{amb}=+25^{\circ}\text{C}$  with relative  $R_{thja}$  depending on the package.
2. Human body model: A 100 pF capacitor is charged to the specified voltage, then discharged through a 1.5 k $\Omega$  resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.
3. Machine model: A 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5  $\Omega$ ). This is done for all couples of connected pin combinations while the other pins are floating.
4. Charged device model: all pins and the package are charged together to the specified voltage and then discharged directly to the ground through only one pin. This is done for all pins.

**Table 2. Operating conditions**

Symbol	Parameter	Value	Unit
$V_{KA}$	Cathode to anode voltage	$V_{ref}$ to 36	V
$I_k$	Cathode current	1 to 100	mA
$T_{oper}$	Operating free-air temperature range		°C
	TL1431C/AC TL1431I/AI	-20 to +70 -40 to +105	
$R_{thja}$	Thermal resistance junction to ambient		°C/W
	SO-8 batwing TO92	130 200

## 4 Parameter definitions

### Reference input voltage deviation over temperature range

$\Delta V_{ref}$  is defined as the difference between the maximum and minimum values obtained over the full temperature range.

$$\Delta V_{ref} = V_{ref\ max.} - V_{ref\ min.}$$

Figure 21. Reference input voltage deviation over temperature range

### Temperature coefficient of reference input voltage

The temperature coefficient is defined as the slopes (positive and negative) of the voltage versus temperature limits within which the reference is guaranteed.

Figure 22. Temperature coefficient of reference input voltage

### Dynamic impedance

The dynamic impedance is defined as  $|Z_{KA}| = \frac{\Delta V_{KA}}{\Delta I_K}$

## 5 Package information

In order to meet environmental requirements, ST offers these devices in ECOPACK<sup>®</sup> packages. These packages have a lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: [www.st.com](http://www.st.com).
